

TROX

HEALTH & SAFETY GUIDE

Technologies and Protective Solutions
to Help Schools Reopen Safely

The image features a large, light grey circular graphic that is partially cut off by the edges of the frame. The graphic consists of a thick, curved line that forms a large, open circle. The background is white, and there is a dark teal horizontal bar at the top of the image.

TROXTM

Helping to Navigate an Uncertain Year

Protect yourself and your students by practicing and promoting healthy habits and adapting campus environments for a safe return to school this year.

Trox has created a Health & Safety product portfolio that addresses some of the toughest challenges facing school administrators and staff who are preparing their facilities for a return to school.

With offerings ranging from hygiene and screening to dividers and signage that can facilitate proper social distancing, we can work with you to implement a wide variety of solutions to help keep students, staff and teachers safe.

Click on one of the categories below for an expanded view of offerings:

[SCREENING DEVICES](#)

[PROTECTIVE DIVIDERS & PARTITIONS](#)

[DEVICE SANITIZATION](#)

[SMART LOCKER SYSTEMS](#)

[DIGITAL SIGNAGE](#)

[PERSONAL PROTECTIVE EQUIPMENT](#)

Trox is committed to supporting your “safety first” approach to back to school. When used with well-developed reentry plans, these offerings can help schools deliver the best possible education to the greatest number of students, while protecting their health and safety in a time of unprecedented change.

Read more on how to prepare for a safe return to school on the [Centers for Disease Control website](#) or find what funds are available for the purchase of technology to support the adaptations needed to keep students and educators safe on the Coronavirus Aid, Relief and Economic Security ([CARES](#)) Act website.

SCREENING DEVICES & ACCESSORIES

A vital step to decreasing the spread of COVID-19 is detecting who is sick or potentially sick before entry.

To minimize the number of individuals who come in contact with each other, and to identify potentially sick individuals, many schools are required to follow applicable health guidance that includes creating entry and exit protocols consistent with the latest health guidelines.

Trox provides a wide variety of screening devices and accessories to support health checks of staff, students and visitors daily, monitoring for changes in temperature or for other symptoms. Although this can be difficult for schools with exceptionally large numbers of students and staff, temperature screening technology can help manage this process.

Handheld scanner

PROTECTIVE DIVIDERS & PARTITIONS

With the return to school, teachers now need a way to circulate among their socially-distanced students — keeping students in their seats and avoiding the prospect of them crowding around specific areas in the classroom.

Many of Trox’s collaborative solutions partners have created protective dividers and partitions that can easily be installed to preserve recommended physical distancing. These solutions can be used in the classroom, as well as in office workspaces, reception seating areas, or to modify or reconfigure spaces to ensure compliance with physical distancing rules.

Desktop screens come in 10 sizes

COPERNICUS

SNK201
Counter height portable sinks

DEVICE SANITIZATION

Mobile phone users touch their phone over 2,600 times each day. And 10% of those touch their phones twice as much.¹ That's a lot of contact!

Although students and staff are encouraged to wash their hands often, germs can be spread unknowingly by touching devices that aren't sanitized. Through routine sanitization practices, the potential threat posed by contaminated devices can be significantly reduced.

SMART LOCKER SYSTEMS

BRETTFORD

TECHGUARD CONNECT

Smart locker for zero contact exchange of devices

Safety is a priority this year, and ensuring it will test school operations more than ever.

Installing Smart Lockers to distribute learning tools like laptops and Chromebooks can help schools meet health and safety guidelines. They allow for contactless pickup and delivery of devices without the use of a key or combination.

This limits the amount of exposure to students and families when participating in activities ranging from asset assignment and distribution to expedited repair and replacement, all while protecting those who facilitate the process.

DIGITAL SIGNAGE

When it comes to sharing safety messages, it's important to communicate in many different ways to encourage students and staff to adopt new behaviors.

Digital signage has become an effective way to message in highly visible areas (e.g., entrances, hallways, restrooms) to remind students, staff and visitors about protective measures in place and to post important announcements.

Trox can recommend all-in-one signage units, or utilize already existing equipment such as TV screens with digital signage to help you share important information in a timely fashion.
